

HOSPITAL FORMULARY REPORT
JANUARY 2024

Proposed Additions:

Humate P vials (formerly managed by Blood Bank)
Methimazole 5mg (current formulary drug – different strength)
Latuda 20mg (current formulary drug - different strength)
Abrysvo (RSV vaccine for pregnant women 32-36 weeks or patients > 60 years of age)
Levalbuterol 0.31mg/3ml (NICU)
Excedrin Tension [APAP 500mg/Caffeine 65mg] – (LSU request)

Proposed Deletions:

Latuda 40mg (adding 20mg)
SilvaSorb gel (low usage)
Acyclovir cream 5% (therapeutic interchange to docosanol 10%)
Calamine lotion (low usage)

Critical Shortages:

Erythromycin ophthalmic ointment (conservation strategy in place for remaining inventory; shortage anticipated to be resolved by end of January 2024)
Phenylephrine 100mcg/ml – 5ml (concentrated Phenylephrine is available; dilution instructions included with vials stocked in Pyxis)
